SAFE MANUAL HANDLING FOR TWO- PERSON TEAMS

The Pristine key is a two-person lifting kit developed for the water industry. It offers a safe, rapid solution to manhole lifting in a single easy to carry storage box. The kit contains a pair of lifting handles; three sets of interchangeable, height-adjustable locking keys; locking plate for split covers; keyhole cleaner; and a protector for worn or damaged keyholes. Also included is training DVD produced by Pristine Condition, that will help operatives maintain best practice on site.

PEACE OF MIND FROM THE HEALTH & SAFETY SPECIALISTS

The Pristine Key has been designed by health & safety specialists Pristine Condition, and with their extensive experience in the field you can be sure that it offers the optimum safe working method for manual cover lifting. The adjustable heights give clear advantages over basic manual keys, and allow a pair of operatives of differing heights to still lift the cover safely, minimising risk of back strain.

The lifting handles are wide enough for two-handed lifting, which helps promote safe technique, and a locking nut on the threaded key section secures the key in place tightly on the cover, reducing the risk of slips and dropped covers. The patented locking plate holds split covers together securely, and reduces the risk of one half coming loose and potentially falling into the manhole, or even causing leg or foot injury. Finally, the keyhole protectors provide yet more stability on covers that might otherwise be unstable to lift.
