

90115SP Chokestrap

The Choke Strap is designed for use by electrical utility personnel for ascending and descending wood poles and will arrest the wearer in case of a fall.

The choke strap can also be used as a work positioning belt if used in conjunction with a secondary fall arrest device. It was designed to be used by left or right handed people and is fully adjustable for use on a range of different sized wood poles with a smaller version being available for small diameter poles.

It features 50mm heavy duty polyester webbing, a rubber grip pad, 2 adjustable buckles, 1 small parachute clip, 1 roller connector to assist adjustment, 1 large double action clip with roller to assist adjustment, 1 large double action snap hook and 2 webbing handles wrapped in clear plastic shrink tubing to assist in climb.

The choke strap is subject to inspection before climbing and should be inspected at regular intervals by a competent person or equipment inspector.
