

Manhole cover lifters

Handylift Wheeler

Low cost lifting for two-keyhole sewer covers

The Proteus Handylift Wheeler is a low cost, manually operated mechanical lifter. The Wheeler requires neither strength nor skill, but is capable of lifting stuck manhole covers. It is primarily designed for sewer covers up to about 700 x 700mm, and can lift single piece covers with the use of our 'Ringtop' keys, or split covers with our 'Swivel-ring Locker Spreader' attachment.

The Handylift Wheeler has a safe working load of one tonne, and works through a combination of powerful screw-jacks for prising open stuck covers, and a telescopic handle for manual leverage with minimal physical effort.

Various key types are available to suit covers with different slot sizes and orientations, making the Handylift Wheeler a great solution to preventing back and finger injury when lifting manhole covers.
