

CONNECTORS

WWW.KONG.IT

EN: Category III Personal Protective Equipment,
CONNECTORS are:

- openable devices which enable the user to assemble a system in order to link himself/herself directly or indirectly to an anchor, or to link other devices;
- parts of a system of protection and/or prevention of the impact created by falls from a height;
- certified according to standards EN 362:2004 and/or EN 12275:2013.

8 - SPECIFIC INFORMATION

Category III Personal Protective Equipment, **CONNECTORS** are:

- openable devices which enable the user to assemble a system in order to link himself/herself directly or indirectly to an anchor, or to link other devices;
- parts of a system protecting/preventing against the impact created by falls from a height;
- certified according to standards EN 362:2004, EN 12275:2013, and/or UIAA 121.

Fig. 1 - Gate locking devices functioning (C1, C2, C3, C4) - These devices prevent the accidental opening of the gate (B).

Fig. 2 - Quick links functioning (type Q) - Quick links shall always be used with the sleeve completely tightened closed.

Fig. 3 - Major strength direction - Avoid loading the device along the minor axis.

Fig. 4 - Force composition - Estimate the real load applied before using this device. This load shall not exceed $\frac{1}{4}$ of the load marked on the device (WLL 1:4).

Fig. 5 - "FAST" application - Fast limits the movement of the connected devices. Connectors supplied with "bar" style ones must be used only after the application.

Fig. 6 - Examples of correct use.

Fig. 7 - Examples of wrong and dangerous use.

Fig. 8 - Examples of wrong and dangerous "FAST" application.

Checks before and after use - Before and after use, make sure that the device is in an efficient condition and that it is working properly, in particular, check that:

- it is suitable for the intended use;
- has not been mechanically deformed;
- does not show cracks, wear, corrosion and oxidation;
- the load indicator is not activated (if equipped);
- the gate locking device (C1, C2, C3, C4) works correctly;
- mobile parts move or rotate without excessive resistance;
- markings are legible;
- the gate (B) shall:
 - when actuated, open completely;
 - when released, close completely and automatically.

Before use and in a position that is completely safe, on each occasion check that the device holds correctly by putting your weight on it. It is recommended to periodically clean and lubricate mobile parts (B and C) with a moderate amount of silicon-based oil.

Important:

- keep in mind this device length in fall arrest systems;
- do not open the gate (B) when a load is applied to this device;

- keep in mind possible accidental openings (e.g. due to shock, vibrations, falls, etc.);
- type Q connectors should only be used where the need of connections is infrequent;
- the load indicator is designed to be activated by a static force between 2,5kN and 3,5kN;
- systems that require frequent opening and closing it is recommended to use model with an automatic gate locking device (C2, C3, C4);
- this device shall be free to move and position itself as shown in fig. 3 and along the foreseeable direction of load application, with the gate (B) always perfectly closed;
- assess the suitability of the chosen anchor point according to the intended application (e.g. dimension of the attachment point, strength, materials, etc.).

Warning:

- never grip on this device as aid in climbing;
- do not apply loads while this device gate (B) is open;
- discard this device if the load indicator has been activated;
- connection with wide elements reduce this device strength and can compromise closing and locking of the of the gate (B).
